PROFESSIONAL PROFILE

Computer Engineering Technology graduate with High Honours (GPA 4.007/5). I develop and support digital solutions using React, TypeScript, C#, .NET, Power Apps, REST APIs, and Microsoft Azure. Practical experience in applied research, API integration, debugging, testing, and technical documentation. Attentive, independent, and thorough, I explain solutions clearly, work well with teams, and support users with patience and a strong service mindset.

TECHNICAL SKILLS

Development and APIs: C#, .NET, JavaScript, TypeScript, Python, Java, React.js, Node.js, NestJS, FastAPI, Spring Boot, REST APIs, WebSocket, Postman.

Support, QA and tools: application and API debugging, bug reproduction, functional and automated testing, Postman, Microsoft 365, Linux, PowerShell, Git/GitHub, technical documentation.

Power Platform and Azure: Power Apps (code apps), Microsoft Dataverse, Power Platform CLI/SDK, Power Automate (in progress), Microsoft Azure, Azure CLI, Key Vault, PowerShell.

Data and tools: PostgreSQL, Cassandra, SQL/CQL, Docker, Jenkins, CI/CD, Git/GitHub, Microsoft 365, functional testing and documentation.

Interpersonal skills: teamwork, active listening, clear communication, attention to detail, independence, adaptability, courtesy and discretion.

PROFESSIONAL EXPERIENCE

Full Stack Web Developer – Applied Research

February 2026 – May 2026

GénieLab – InnovaCité, Collège La Cité | Ottawa, ON

- Developed GENIXI, a web application for navigation and geospatial visualization, using React, TypeScript, Vite, Tailwind CSS and Leaflet in a multidisciplinary Agile team.
- Designed reusable interactive components and integrated FastAPI and Deepgram REST APIs and custom React hooks.
- Diagnosed and resolved API integration issues and cross-platform bugs, including on iOS.
- Performed functional and technical tests to validate fixes and feature stability.
- Configured a secure deployment environment with HTTPS and Cloudflare Tunnel; wrote documentation and transferred knowledge.

Receptionist – Bilingual Customer Service

September 2024 – September 2026

La Cité Residence | Ottawa, ON

- Welcomed and assisted residents and visitors in French and English as the residence's first point of contact.
- Assessed requests, resolved routine problems and referred issues requiring specialized assistance.
- Handled multiple requests at once and prioritized urgent situations with composure, discretion and professionalism.
- Communicated follow-ups clearly to clients, colleagues and managers to ensure continuity of service.
- Used Microsoft 365 daily and worked independently in a dynamic service environment.

SELECTED TECHNICAL PROJECTS

ATIP Tracker – Power Apps code app

2026

Personal project, fictional scenario | Power Apps, React, TypeScript, Vite, Microsoft Dataverse, Power Platform CLI

- Developed a French/English interface to track access-to-information requests, including case creation, deadlines, activity logs and extension requests.
- Modelled Dataverse tables and deployed the code app on Power Platform; documented the architecture and migration from a canvas app.

SecureGate – Secure authentication application

August 2026

Technical project | Java 21, Spring Boot, PostgreSQL, React, Docker, GitHub Actions

- Developed MFA/TOTP authentication, role-based access control (RBAC) and revocable JWT handling.
- Integrated an audit log and documented application security tests.

WCAG Accessibility Auditor

July 2026

Technical project | NestJS, TypeScript, Prisma, PostgreSQL, Playwright, axe-core, React

- Built real accessibility scans with issue categorization and scan history.
- Implemented PDF and CSV exports and protection against server-side request forgery (SSRF).

GENIXI – Navigation web application

February 2026 – May 2026

Applied research project | React, TypeScript, Vite, Tailwind CSS, Leaflet, Web Speech API, FastAPI, Deepgram

- Developed a component-based interface with geospatial visualization, REST APIs and voice features.
- Debugged, tested across platforms and documented the application.

SmartCart – Android mobile application

December 2025 – April 2026

Team capstone project | Kotlin, Jetpack Compose, NestJS, WebSocket, Railway, Cloudinary

- Integrated 22 API endpoints to connect the mobile application to a cloud backend and manage data exchange.
- Implemented real-time data and text-to-speech features in a collaborative team setting.

Distributed reservation system

March 2026

Academic project | Cassandra, CQL, Docker, Query-First modelling, Chebotko method

- Deployed a three-node Cassandra cluster in Docker with a replication factor of RF=3.
- Designed 12 CQL tables around query requirements to optimize data access.

Microsoft Azure infrastructure

January 2026 – April 2026

Academic project | Azure CLI, PowerShell, VNets, VMs, Storage, Key Vault, VNet Peering

- Deployed and configured cloud infrastructure including virtual networks, virtual machines and storage services.
- Automated configuration tasks with PowerShell and applied network and security settings.

EDUCATION

Ontario College Advanced Diploma

June 2026

Computer Engineering Technology | Collège La Cité, Ottawa, ON

High Honours — GPA 4.007/5. Coursework in web and mobile development, object-oriented programming, software architecture, APIs, databases, cloud computing, cybersecurity, networking, software testing and Agile methods.

LANGUAGES

French: native • English: intermediate (continuing to improve)
